ImpraMatic
upgradeable control system for wood treatment autoclave

The **ImpraMatic LT** is designed for an intuitive use of your vacuum-pressure wood treatment autoclave.
An easy to use 12" color **touch panel interface**, mounted directly on the control cabinet face, shows the live status of the current cycle through a simple **synoptic**.

This interface allows the management of **25 different treatment programs** that you can modify to your needs. Timed treatment, volume treatment or saturation treatment parameters are fully customizable.

On the ImpraMatic LT, you can also view the **cycle graphs**, that are automatically recorded on a CF memory card. As an option, a color printer can be linked for the cycle graphs and data printing.

Also, the machine maintenance is eased by a screen showing the current and past defaults, and help screens are also available for troubleshooting. **Remote maintenance** through your internet connected company network is also possible.

You need advanced traceability features ? A close up look at your production data ? Then the **ImpraMatic Pro** is made for you.

Designed to be linked to the ImpraMatic LT, it includes **a desktop PC** running the ProData software:
- **Record and archive** cycle data on hard drive,
- Manage separate data for the different **lots** of a cycle batch,
- Managing a **customer database**, linking customer/lot/cycle
- Printing a **treatment data sheet** for attaching to your deliveries
- …

Specifically developed code is also possible to meet your own need, as for instance to link the ImpraMatic to your existing MIS.
